

The Peri-ometer suggests the challenge the Home learning may offer. How **hot** are you willing to go?!

## Hypothesis - 'The Holderness Coastline should not be protected'

	Where is the Holderness Coastline?	How is the Holderness coastline being changed?	How were the landforms of Holderness created?	How can we protect the coast?	Who should pay for the protection of the coast?	Do you agree with your hypothesis?
<b>L6</b>	With the aid of maps explain in detail the location of Holderness.	<b>Design</b> a page for a Geography text book aimed at Year 7 students about types of weathering and erosion.	Explain the formation of the erosional and depositional features on the Holderness coastline . Suggest what might happen to these features in future.	Evaluate the methods of coastal protection currently used in the Holderness area.	Explain who you think should pay for the protection of the coast. Include the opinions of different groups of people.	Justify your opinion fully
<b>L5</b>	Explain the location of the Holderness Coastline using an annotated map.	Produce a cartoon strip that <b>explains</b> a type of weathering or erosion that is affecting Holderness.	Explain the formation of some of the features on the Holderness coastline Remember to include erosional and depositional features. You may use diagram or photos.	With the aid of diagrams explain how some methods of coastal protection currently used in the Holderness area work.	Explain who you think should pay for the protection of the coast.	Explain your point of view.
<b>L4</b>	Describe the location of the Holderness Coastline using a map.	Find photographs that show evidence of weathering. Try to identify the type of weathering.	With the aid of diagrams explain how one feature of coastal erosion and one of coastal deposition are formed.	Research the methods of coastal protection currently used in Holderness.	Choose who should be responsible for paying for defences. Try to suggest why.	State whether you agree or disagree and give reasons why.
<b>L3</b>	Identify where the Holderness Coastline is. You should use a map.	Draw a table that names the types of erosion and weathering that are shaping the coast.	Label two photographs of coastal features (one formed by erosion and one by deposition)	List the methods used to protect the coast	Identify who you think should pay for coastal defences.	State whether you agree or disagree
